**Course Fee: \$152.50**

**ARTS 389** Topics: Everyday Art

Sec 016 CRN 51093 Dever F 11:30-6:00 pm CERIA 365

Offered with MA 330/430 and RELG 347. "Everyday." Adjective. Ordinary, routine, common; also: *things just as they are*. "Every day." Adverb. Daily, habitually; also: *steadfastly and with delight*. "EveryDay Art." An adjectival noun adverb—or some such thing, surely! Think: a good cup of tea made mindfully each morning; a symphony composed on paper napkins, a flip-book movie—whatever creative art project or inventive writing you might imagine. This is a course about cultivating art-making as a daily habit, a way of seeing, being, and responding to our world. With Tibetan contemplative artist Chögyam Trungpa's *True Perception*—a fresh, direct address to artists of all kinds—plus the work of other arts exemplars, we'll practice the techniques of secular mindfulness-awareness meditation, thus quieting our minds so that insight has the means, method, and opportunity to arise. Our objects of contemplation will include a range of profoundly moving, moving-images—films to inspire artists. Off the cushion and away from our movie-theater seats, part of your "homework" will be to visit your own sacred and secular sites (and determine just what that might mean for you). Watching your mind in all manner of everyday situations will form the basis of your work, which we could call "In(ter)dependent Studies." Simply put: I'll offer you artistic food for thought, which you'll consider, and then you'll offer our class something in response. You can work by yourself or complete a group project. All artistic mediums are welcome: screenplays, critical essays, photography portfolios, scholarly investigations, cinematic novellas, short films, and beyond. As are all classes in Contemplative Cinema Course Series, there's no dogma, nothing to "believe," no special skills required for enrollment. MA430 may be taken for graduate credit with approval from your home department.

**Course Fee: \$163.00****ARTS 429****Topics: Politics of Performance**

Sec 003 CRN 46822 Ho MW 1:00-3:45 ART 304C/353

Offered with ARTS 529.003, IFDM 491, MA 429, MUS 435/535 and THEA 495. In this seminar we will explore the politics of performance: how the presence of bodies in space and time implicates a 'viewer' of aesthetic experience; how performance points to communities to come; how performance destabilizes both singularity and collectivity. We will discuss a broad range of works from 20th century avant-garde traditions in theatre, music, and visual art to those of the contemporary moment. We will hear from invited artists, both in person and via Skype. Readings will include texts by Antonin Artaud, Bertold Brecht, Agosteo Boal, Susan Sontag, Gilles Deleuze and Felix Guattari, Jacques Rancière, Judith Butler, Jill Dolan, Fred Moten, José Esteban Muñoz, Jan Verwoert, Diana Taylor, Paul Chan, and others. Students from art studio, art history, and other disciplines are welcome. *"The arts only ever lend to projects of domination or emancipation what they are able to lend to them, that is to say, quite simply [ . . . ] : bodily positions and movements, functions of speech, the parcelling out of the visible and the invisible."* - Jacques Rancière, *"The Distribution of the Sensible"*

**Course Fee: \$120.50****ARTS 429****Topics: Species, Space, and the Politics of Survival**

Sec 005 CRN 59418 Banerjee F 9:00-11:45 ART 304C

Offered with ARTS 529.005, BIOL 402/502, CRP 470/570, LA 511, SUST 402, and UHON 401. About a hundred species are going extinct from our planet every day. Biologists inform us that we are currently facing the Sixth Extinction and that this one is caused by human actions, meaning the crisis is as much scientific as it is social. How can environmental art and humanities, informed by science, be mobilized to address the crisis and mitigate the epic loss? In this seminar course we will study recent texts from diverse disciplines: Elizabeth Kolbert's *The Sixth Extinction* (science journalism), Ursula Heise's *Imagining Extinction: The Cultural Meanings of Endangered Species* (environmental literary studies), Ashley Dawson's *Extinction: A Radical History* (political ecology), Fred Magdoff and Chris Williams' *Creating an Ecological Society: Toward a Revolutionary Transformation* (biology and political economy), and T. J. Demos' *Against the Anthropocene: Visual Culture and Environment Today* (contemporary art criticism), to name a few; and engage with varieties of visual art and long-term creative projects, including Maya Lin's *What Is Missing*. The course will include readings, conversations, scholarly and creative production, and maintenance of a journal, in which to include an entry (stories/visual) informed by daily observations, and a final project. The purpose of the journal would be help appreciate the significance of citizen art, citizen humanities, citizen science, for our time, as each of us could participate in shaping the future of life on our planet. The course will also overlap with an exhibition of the instructor's work at the UNM Art Museum, which will relate to many of the concepts discussed in the class.

Computational sustainability focuses on computational methods for balancing environmental, economic, and societal needs for a sustainable future. It is a new, highly interdisciplinary field full of diverse developments. The course is designed to be an introduction to computational sustainability, providing a broad coverage of the field. It is suitable for advanced undergraduate and graduate students in computer science, computer engineering or from other disciplines with good familiarity with computational methods. Computational Sustainability encompasses computational challenges in disciplines as diverse as environmental sciences, economics, sociology, and biological and environmental engineering. In this course, we will not deal with political or policy issues in the domain of "sustainability," but focus entirely on energy. We will study smart energy use, as well as energy reduction, and assignments will focus on energy efficiency and renewable energy. Topics may include the following: renewable energy potentials, e-vehicles, energy-constrained scheduling, and wireless sensor networks. Computational methods may include: Sensor networks for monitoring environments: data collection, analysis, synthesis, and inference in large-scale autonomous sensor networks. Support for public engagement and decision making by the public; collecting, modeling, and presenting relevant information via usable interfaces; preference and automated decision making for power purchases (managing the timing of appliance loads to minimize cost while maximizing preferences); crowd-sourcing and citizen science; computer games and intelligent tutoring systems; and models, methods and tools for dissemination and increasing awareness of sustainability practices.
